The independent scientific research center of the Dayeng Foundation consists of international scientists, physicians and therapists who devote their lives to the exploration of the human organism with the utmost conviction. Dependent science, if it can still be called science, has sold itself to industries which represent opposing interests, for the interests of the industries.

Our main research is the human immune system. The immune system is a unique natural microcosm and has not yet been fully explored. The classical medicine hardly respects the immune system. We see the results every day. The so-called civilization diseases such as cancer, Parkinson's disease, multiple sclerosis, AIDS, cardiovascular diseases, allergies, skin diseases and so on are the result of constant poisoning of the immune system. We have studied the influence of pharmaceuticals, chemicals and personal care products and many other negative influences on the immune system internationally. The results are clear and can be requested at any time.

The immune system is a unique defense system that nature has developed and perfected in millions of years. The human immune system had worked perfectly for thousands of years, until humans became industrialized. Poisons in the environment, food, care products, especially in creams and so on, have destroyed the human immune system since industrialization. Particularly great destruction is caused by pharmaceuticals and especially by vaccination. Pharmaceuticals are not made to cure diseases, chemicals can not, pharmaceuticals are made to achieve profits. What happens in the human body?

What cause vaccinations? The toxic ingredients such as mercury, aluminum, formaldehydes and much more, cause epilepsy, Parkinson's, nerve damage, asthma, brain damage and much more.

The synapses in the brain are blocked and can no longer communicate with one another, mental disability is the consequence. Nerve cells are killed or over-stimulated, Parkinson's and other nerve damage are the result. Depression and memory loss are the consequences of vaccination. The entire immune system is destroyed. Many millions of babies worldwide also die from the effects of vaccinations.

In the further life more pharmaceuticals are added, as well as chemical bombs in the form of body care products, cosmetics, chemically contaminated foods and so on. The immune system that has already been attacked can no longer cope with all this. After a certain period of time, which can be differently long, the result is shown in every human being. Allergies, skin diseases, respiratory diseases but also cancer, Parkinson's disease, multiple sclerosis and so on.

The human body is a biological power plant and can not work with chemistry. The human immune system will collapse and the human being becomes sick or worse he dies. The deaths will be no less, on the contrary. Do you want to die early? No? Then stop this poisoning. Especially antibiotics that are irresponsibly prescribed by doctors for every opportunity destroys the natural immune system very decisively.

Many people consider these facts too little. Most people trust the doctors and clinics without restriction, but you should never be so careless and forget that doctors, clinics, universities and research institutes are always profit-oriented companies that are directly dependent on the pharmaceutical industry. This fact is crucial to your health and the length of your life.

Infants who survive the severe vaccine poisoning and do not appear to have suffered any further damage have in any case no intact immune system, this has destroyed the vaccination. In the further life of humans further pharmaceuticals are added. By the way, there is not a single pharmaceutical that has ever eliminated the causes of a disease and there will not be any such thing in the future. A pharmaceutical can, if at all, temporarily alleviate the symptoms but only in the short term with considerable poisoning of the organs and the immune system. An example with pharmaceuticals against pain. If a person regularly takes medications for pain, the kidneys are already significantly damaged after three days of ingestion. The paradox is that when pain medication is used for a long time, the pain receptors react more strongly in the body, the pain receptors get used to the painkillers and the patient needs more and more powerful pharmaceuticals. The kidneys are then so severely damaged that a pain patient often becomes a dialysis patient. The cause of pain, however, remains almost unrecognized. A reasonable anamnesis hardly makes a doctor any more. Classical medicine has mutated into the slaves of the pharmaceutical industry and has no interest in curing more people, quite the opposite. This is, unfortunately, the reality, we have investigated this in more than 20 countries.

What can we do for you?

The independent Research Center of the Dayeng Foundation has been researching biology, especially the human immune system for many years, in collaboration with other international scientists. From these experiences we have developed therapies that repair the immune system. We are now able to successfully treat the so-called civilization diseases that result from a destroyed immune system. These diseases include cancer, Parkinson's, multiple sclerosis, skin diseases, allergies and even AIDS and other diseases. Since 2001, the founding year of our Therapy Center, we have detailed statistics. You can see the statistics here.

Last update July 2017

Disease	Duration of therapy
Cancer therapy The average healing success since 2001 is 99.8%	At least 14 days
Parkinson's disease The average healing success since 2001 is 98%	At least 14 days
AIDS The average healing success since 2001 is 100%	At least 14 days
Multiple Sclerosis The average healing success since 2001 is 87%	At least 14 days
Neurodermatitis The average healing success since 2001 is 99%	At least 14 days
Mycosis (skin mold disease) The average healing success since 2001 is 96.5%	At least 14 days
Allergies The average healing success since 2001 is 97%	At least 14 days
Cardiovascular disease The average healing success since 2001 is 97%	At least 14 days
Epilepsy The average healing success since 2001 is 76%	At least 14 days
Borreliosis The average healing success since 2001 is 99%	At least 14 days
Chronic gastritis The average healing success since 2001 is 99.5%	At least 14 days

Also other diseases and psychological problems are dealt with. Please inquire. Our international team of doctors and therapists will be happy to welcome you. We speak English and German.
