Therapy-Center

Dear patient, my name is Dr. biol. hom. Bill H. Chreslow, I am a scientist and medical director of the Therapy Center of the Dayeng Foundation. All our therapies have a scientific basis. Our science center has been researching biology and especially the human immune system for more than 30 years. From these experiences, therapies have been developed with exceptionally large treatment successes against predominantly the following diseases. Cancer, multiple sclerosis, Parkinson's disease, AIDS, neurodermatitis, asthma and other allergies, vaccine damage, cardiovascular disease and some more.

The human organism is a miracle of nature. The immune system is the most important component to protect and keep this organism alive. The immune system is a microcosm that classical medicine does not understand. How do you recognize this? Classical medicine fills the human organism with chemicals and hopes that these chemicals (pharmaceuticals) will repair something that is disturbed.

What happens instead? Correctly, these chemical substances, called pharmaceuticals, then destroy even more in the organism.

If a malfunction happens in the body then this is a sign that the immune system is disrupted. One speaks of a disease. How do diseases develop? Always by negative influences from outside. Our immune system is programmed so that it can deal with many influences well. Many thousands of years worked this Prinzip very well.

On one thing the immune system has not been programmed: Chemicals. All so-called civilization diseases are the consequence of this massive chemical bombardment on the immune system. What are the consequences? Cancer, multiple sclerosis and other nervdisorders, allergies and so on. If this chemical bombardment is stopped, the immune system can be repaired. This repair is what we do. We separate the organism from these negative influences and regenerate the immune system together with the lymph system. The result is a regenerated and healthy organism. Our success is exceptionally high. The successes achieved through the use of pharmaceuticals are well known. Pharmaceuticals have never repaired a disease (malfunction of the immune system). The opposite is the case. It is important to understand that.

So if you are looking for a treatment that actually works, then we are looking forward to helping you.

What do you have to do? You register for at least 14 days of therapy. You decide the time. You will then receive a confirmation from us. They then come to us and we begin with the therapy. Our therapy center is located in the Philippines, for good reason. In the Philippines, we achieve the best treatment successes. The reasons are: Very clean air due to the lack of industry, a constant and pleasant climate, which is very beneficial for the healing process, special plants which have been shown to stabilize and strengthen the immune system very quickly.

We will be glad to answer further questions. Please visit our website and send us your questions.
