

**Scientific investigation report
On the health status of people in different countries
and the causes of diseases**

Head of the investigation: Prof. Lupus Dayeng
Dayeng Foundation

Period of the investigation: September 1998 to August 2001

1. Objective and method of investigation
2. Region of the investigation and results
3. Total results of the investigation in Summary

The investigation was carried out in the following countries:

Canada, USA, Brazil, England, Denmark, Germany, Italy, Egypt, China, Nepal, India, Philippines, Australia.

This report is limited to the facts analyzed, no personal opinion or conclusions are given.

1. Objective of the investigation

The aim of the investigation is to find out what causes so-called civilization diseases. Among the civilization diseases are: cancer, AIDS, Parkinson's disease, asthma, multiple sclerosis, allergies, cardiovascular diseases, skin diseases.

People were randomly selected and medically examined. The blood, the urine, skin texture, body fat percentage, the lymph system were investigated. A survey of life circumstances and lifestyle was carried out and allergy tests were carried out.

The persons had an age between 14 years and 70 years. In some countries, with higher life expectancy, some people with an age of 90 years were studied.

2. Regions of the investigation

2.1 Canada

2000 examined people. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong. The food of the people is often one-sided. Sufficient vitamin intake is missing.

Consumption of fast food and junk food:

74% of the people surveyed take these meals daily.

Consumption of pharmaceuticals:

72% of the people under investigation regularly take pharmaceuticals.
19% of the people under investigation sometimes take pharmaceuticals.
9% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

100% of people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

96% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

89% of the people under study have never dealt with alternative treatment methods. People rely exclusively on classical medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is very large.

Existing diseases in percent of the people under investigation

6% cancer
7% so-called AIDS
2% multiple sclerosis
1% Parkinson's
16% Asthmatic disorders
54% allergies
18% skin diseases
46% cardiovascular disease
26% suffer from constant depression
Many people have more than one, of the specified diseases.

Summary of results

A very large proportion of the population has health problems. The food is one-sided and contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. An explanation about a healthy way of life hardly takes place. People live in a constant, relatively high stress situation.

— | —

2.2 United States

2000 examined people. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong. People's food is often one-sided. Sufficient vitamin intake is missing.

Consumption of fast food and junk food:

86% of the people surveyed take these foods daily to themselves.

Consumption of pharmaceuticals:

87% of the people under investigation regularly take pharmaceuticals.

10% of the people under investigation occasionally use pharmaceuticals.
3% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

100% of people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

100% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

97% of the people under study have never had to deal with alternative treatment methods, which rely exclusively on classic medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is extremely large.

Existing diseases in percent of the people under investigation

7% cancer
12% so-called AIDS
4% Multiple Sclerosis
2% Parkinson's
24% Asthmatic disorders
67% allergies
24% skin diseases
58% cardiovascular disease
38% suffer from constant depression
Many people have several of the diseases listed.

Summary of results

A very large proportion of the population has health problems. The food is one-sided and contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. Advertising for pharmaceuticals is very aggressive and ubiquitous. An explanation about a healthy way of life hardly takes place. People live in a constant, relatively high stress situation.

— | —

2.3 Brazil

1200 people under investigation. The investigations took place in different regions of the country.

Results:

The immune system is quite stable, only 32%. Of the immune system, the immune system is weaker. The diet of the people is 90% balanced and healthy. Only in the city regions where people are very poor, the diet is one-sided and lacking sufficient vitamins.

Consumption of fast food and junk food:

36% of the people surveyed take these foods daily.

Consumption of pharmaceuticals:

8% of the people under investigation regularly take pharmaceuticals.

12% of the people under investigation occasionally take pharmaceuticals.
80% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

46% of the people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

35% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is not so intense in the public media.

Alternative treatments

Only 8% of the people under study have never been concerned with alternative treatment methods.

Stress factor

The stress factor is somewhat present in the city areas. People are not affected as much by stress as they are in industrialized countries. Manipulation through media advertising is great, but most people do not see these media.

Existing diseases in percent of the people under investigation

- 1% cancer
- 7% so-called AIDS
- 0% multiple sclerosis
- 0% Parkinson
- 2% Asthmatic disorders
- 1% allergies
- 3% skin diseases
- 6% cardiovascular disease
- 4% suffer from constant depression

Many people have several of the diseases listed, but the overall sum of diseases is very low.

Summary of results

A very small proportion of the population has health problems. The diet is predominantly healthy and contains the most important nutrients including vitamins. Comparatively few pharmaceuticals are consumed. Advertising for pharmaceuticals is not so obvious. The stress factor of people is relatively low.

— | —

2.4 England

1200 examined people. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong, partly weak. The diet of people is often one-sided. Sufficient vitamin intake is missing.

Consumption of fast food and junk food:

89% of the people surveyed take these foods daily.

Consumption of pharmaceuticals:

79% of the people under investigation regularly take pharmaceuticals.
19% of the people under investigation sometimes take pharmaceuticals.
2% of the people under study use little or no pharmaceuticals.

Consumption of chemical personal care products:

100% of people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

99% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

98% of the people under study have never dealt with alternative treatment methods, which people rely exclusively on classical medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is very large.

Existing diseases in percent of the people under investigation

5% cancer

9% so-called AIDS

4% Multiple Sclerosis

3% Parkinson's

28% Asthmatic disorders

63% allergies

26% Skin diseases

49% cardiovascular disease

37% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A very large proportion of the population has health problems. The diet is one-sided and contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. An explanation about a healthy way of life hardly takes place. People live in a constant, relatively high stress situation. The pharmaceutical industry is very influential in this country. In all media, aggressive advertising for pharmaceuticals takes place, mainly by Bayer.

— | —

2.5 Denmark

1000 people under investigation. The investigations took place in different regions of the country.

Results:

The immune system is relatively weak in about 40% of the people under investigation. People's diet is one-sided. Sufficient vitamin intake is deficient.

Consumption of fast food and junk food:

56% of the people surveyed take these meals daily to themselves.

Consumption of pharmaceuticals:

65% of the people under investigation regularly take pharmaceuticals.

31% of the people under investigation sometimes take pharmaceuticals.

4% of the people under study take little or no pharmaceuticals.

Consumption of chemical personal care products:

100% of people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

99% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

92% of the investigated people have never been concerned with alternative treatment methods that people rely exclusively on classical medicine.

Stress factor

The stress factor is mediocre, in the large cities more than in the peripheral areas. The manipulation through product advertising, in media, is very large.

Existing diseases in percent of the people under investigation

4% cancer

5% so-called AIDS

1% multiple sclerosis

2% Parkinson's

18% Asthmatic disorders

39% allergies

11% skin diseases

37% cardiovascular disease

31% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A very large proportion of the population has health problems. The diet is partly unhealthy and contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. An explanation about a healthy way of life hardly takes place. People live partly in a constant stress situation.

— | —

2.6 Germany

1200 examined people. The investigations took place in different regions of the country.

Results:

The immune system is very weak. The diet of people is often one-sided. Sufficient vitamin intake is missing.

Consumption of fast food and junk food:

72% of the people surveyed take these meals daily.

Consumption of pharmaceuticals:

81% of the people under investigation regularly take pharmaceuticals.

18% of the people under investigation sometimes take pharmaceuticals.

1% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

100% of people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

100% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong and aggressive in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

99% of the people under study have never had to deal with alternative treatment methods, which people rely exclusively on classical medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is extraordinarily great.

Existing diseases in percent of the people under investigation

7% cancer

8% so-called AIDS

3% Multiple Sclerosis

2% Parkinson's

24% Asthmatic disorders

63% allergies

29% Skin diseases

52% cardiovascular disease

38% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A very large proportion of the population has health problems. The diet is one-sided and contains too little important nutrients including vitamins. A great deal of pharmaceuticals are consumed. An explanation about a healthy way of life hardly takes place. The pharmaceutical industry is very powerful in Germany, especially the Bayer company can be seen in all media with advertising. The pharmaceutical company Bayer has a very great power in Germany. The German government has subordinated itself to this power. This fact was confirmed to us by the government. For example, the babies are injected with very many and highly dosed vaccinations. The Parents who fight against it, the state takes the children away. In the course of the investigations, we have found that the large-scale industry dominates in Germany and that the state is merely a marionette of this industry. The vaccines we analyzed contained mercury and formaldehyde. These ingredients weaken the immune system, the nerve and brain cells. (There is another scientific study on vaccines which can be requested)

People live in a constant, relatively high stress situation.

— | —

2.7 Italy

1200 examined people. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong. The diet of people is often one-sided. Sufficient vitamin intake is particularly absent in the large cities.

Consumption of fast food and junk food:

62% of the people surveyed take these meals daily.

Consumption of pharmaceuticals:

61% of the people under investigation regularly take pharmaceuticals.
24% of the people under investigation occasionally use pharmaceuticals.
15% of the people under study use little or no pharmaceuticals.

Consumption of chemical personal care products:

97% of the people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

94% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

81% of the people under study have never had to deal with alternative treatment methods, which rely exclusively on classic medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is relatively large.

Existing diseases in percent of the people under investigation

4% cancer
3% so-called AIDS
1% multiple sclerosis
0% Parkinson
24% Asthmatic disorders
37% allergies
9% skin diseases
32% cardiovascular disease
12% suffer from constant depression
Many people have several of the diseases listed.

Summary of results

A large proportion of the population has health problems. The food contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. There is no information about a healthy lifestyle. People live partly in stressful situations.

— | —

2.8 Egypt

1200 examined people. The investigations took place in different regions of the country.

Results:

The immune system is healthy, in the case of most underestimated people. The diet of the people is only one-sided in the city. Sufficient vitamin intake is predominant.

Consumption of fast food and junk food:

6% of the people surveyed take these meals daily to themselves.

Consumption of pharmaceuticals:

12% of the people under investigation regularly take pharmaceuticals.
18% of the people under investigation sometimes take pharmaceuticals.
70% of the people under study use little or no pharmaceuticals.

Consumption of chemical personal care products:

67% of the people under investigation use daily chemical personal care products from the retail trade.

Manipulation by mainstream media

46% of the people surveyed are exclusively informed about TV, magazines and public notices. Advertising on pharmaceuticals is not so much available.

Alternative treatments

26% of the people under study have never been concerned with alternative treatment methods.

Stress factor

The stress factor is relatively high in some regions. The reason, however, is the political situation. The manipulation by means of advertising, in media, is not as great as in Western countries.

Existing diseases in percent of the people under investigation

1% cancer

1% so-called AIDS

0% multiple sclerosis

0% Parkinson

2% Asthmatic disorders

1% allergies

2% skin diseases

4% cardiovascular disease

1% suffer from constant depression

Many people have several of the diseases listed, but in this country, however, very low

Summary of results

The population has hardly any health problems. The food contains for the most part sufficient nutrients including vitamins. Comparatively few pharmaceuticals are consumed. However, there is no information about a healthy way of life.

— | —

2.9 China

2000 people examined. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong in the city locations including Hong Kong. The diet of people is often one-sided in the city. Sufficient vitamin intake is particularly absent in the large cities. In rural areas, the diet is balanced and healthy.

Consumption of fast food and junk food:

39% of the people surveyed take these meals daily to themselves.

Consumption of pharmaceuticals:

19% of the people under investigation regularly take pharmaceuticals.

21% of the people under investigation sometimes take pharmaceuticals.

60% of the people under study use little or no pharmaceuticals.

Consumption of chemical personal care products:

66% of the people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

68% of the people surveyed are informed exclusively about TV, magazines and public notices. Advertising across pharmaceuticals is very common in all media but not as strong as in Western countries.

Alternative treatments

11% of the people under study have never been concerned with alternative treatment methods.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is relatively large. In addition, people are already very much manipulated and educated in schools.

Existing diseases in percent of the people under investigation

8% cancer

2% so-called AIDS

4% Multiple Sclerosis

4% Parkinson's

19% Asthmatic disorders

21% allergies

4% skin diseases

29% cardiovascular disease

4% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A relative share of the population has health problems. The food partially contains insufficient nutrients including vitamins. Comparatively few pharmaceuticals are consumed. An explanation about a healthy way of life hardly takes place. People live partly in stressful situations, the reason is a strong education of the people by the government.

— | —

2.10 Nepal

1000 people under investigation. The investigations took place in different regions of the country.

Results:

The immune system is strong. The diet of the people is versatile. Sufficient vitamin intake is predominant.

Consumption of fast food and junk food:

4% of the people surveyed take these foods daily to themselves.

Consumption of pharmaceuticals:

5% of the people under investigation regularly take pharmaceuticals.

7% of the people under investigation sometimes take pharmaceuticals.

88% of the people under study use little or no pharmaceuticals.

Consumption of chemical personal care products:

41% of the people under investigation use chemical daily personal care products from the retail trade.

Manipulation by mainstream media

12% of the people surveyed are exclusively informed about TV, magazines and public notices. Advertising through pharmaceuticals is scarce in all media

Alternative treatments

8% of the people under study have never been concerned with alternative treatment methods.

Stress factor

There is hardly any stress factor. The manipulation through product advertising, in media, is relatively small.

Existing diseases in percent of the people under investigation

1% cancer

0% so-called AIDS

0% multiple sclerosis

0% Parkinson

2% Asthmatic disorders

0% allergies

1% skin diseases

8% cardiovascular disease

0% suffer from constant depression

Summary of results

Health problems are scarce. The food contains the most important nutrients including vitamins. It hardly consumed pharmaceuticals. People experience hardly any stressful situations.

— | —

2.11 India

1200 people under investigation. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong. The diet of people is often one-sided. Sufficient vitamin intake is particularly absent in the large cities. The reason is a very high unemployment and poverty of the population.

Consumption of fast food and junk food:

24% of the people surveyed take these meals daily to themselves. But mostly in the big cities.

Consumption of pharmaceuticals:

12% of the people under investigation regularly take pharmaceuticals.

9% of the people under investigation sometimes take pharmaceuticals.

79% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

57% of the people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

74% of the people surveyed are exclusively informed about TV, magazines and public announcements. Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise. However, most people do not have too little money, otherwise the consumption of pharmaceuticals would certainly be higher.

Alternative treatments

21% of the people under study have never been concerned with alternative treatment methods.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is relatively large.

Existing diseases in percent of the people under investigation

8% cancer

12% so-called AIDS

4% Multiple Sclerosis

2% Parkinson's

12% Asthmatic disorders

13% allergies

12% Skin diseases

37% cardiovascular disease

16% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A large proportion of the population has health problems. The food contains too little important nutrients including vitamins. Comparatively few pharmaceuticals are consumed. There is no information about a healthy lifestyle. People live partly in great stress situations.

— | —

2.12 Philippines

2000 people examined. The investigations took place in different regions of the country.

Results:

The immune system is relatively strong. The diet of the people is very versatile and healthy. Sufficient vitamin intake is available.

Consumption of fast food and junk food:

12% of the people surveyed take these meals daily to themselves.

Consumption of pharmaceuticals:

14% of the people under investigation regularly take pharmaceuticals.

6% of the people under investigation sometimes take pharmaceuticals.

80% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

69% of the people under investigation use chemical personal care products from the retail sector every day.

Manipulation by mainstream media

84% of the people surveyed are informed exclusively about TV, magazines and public notices.

Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise. However, people lack the money for pharmaceuticals, otherwise the consumption of pharmaceuticals would certainly be higher.

Alternative treatments

8% of the people under study have never been concerned with alternative treatment methods.

Stress factor

The stress factor is relatively low. The mentality of the Philippine people blocks stress, people live with a great serenity. Many people have two to three jobs. The manipulation through product advertising, in media, is relatively large.

Existing diseases in percent of the people under investigation

2% cancer

1% so-called AIDS

0% multiple sclerosis

0% Parkinson

2% Asthmatic disorders

1% allergies

1% skin diseases

8% cardiovascular disease

0% suffer from constant depression

Many people have several of the diseases listed. However, overall diseases are very rare.

Summary of results

Health problems are scarce. This is due to a very healthy diet, a lot of fish, poultry and fruits and vegetables are eaten. The food contains all important nutrients including vitamins. Comparatively few pharmaceuticals are consumed. However, there is no information about a healthy way of life. People do not live in stressful situations, they reject stress. The people do not create stress themselves.

— | —

2.13 Australia

1200 people under investigation. The investigations took place in different regions of the country.

Results:

The immune system is not particularly strong. The diet of people is often one-sided. Sufficient vitamin intake is particularly absent in the large cities.

Consumption of fast food and junk food:

71% of the people surveyed take these meals daily.

Consumption of pharmaceuticals:

64% of the people under investigation regularly take pharmaceuticals.

28% of the people under investigation occasionally use pharmaceuticals.

8% of the people under investigation use little or no pharmaceuticals.

Consumption of chemical personal care products:

98% of the people under investigation use chemical daily personal care products from the retail trade.

Manipulation by mainstream media

98% of the people surveyed are informed exclusively about TV, magazines and public notices.

Advertising through pharmaceuticals is very strong in all media. It is suggested to people that the consumption of pharmaceuticals is the right one for every little malaise.

Alternative treatments

96% of the people studied have never dealt with alternative treatment methods, which people rely exclusively on classical medicine.

Stress factor

The stress factor is relatively high. Many people have two to three jobs. The manipulation through product advertising, in media, is relatively large.

Existing diseases in percent of the people under investigation

8% cancer

9% so-called AIDS

4% Multiple Sclerosis

3% Parkinson's

26% Asthmatic disorders

27% allergies

12% Skin diseases

41% cardiovascular disease

16% suffer from constant depression

Many people have several of the diseases listed.

Summary of results

A large proportion of the population has health problems. The food contains too little important nutrients including vitamins. Comparatively large amounts of pharmaceuticals are consumed. There is no information about a healthy lifestyle. People live partly in great stress situations.

3. Total results of the investigation in Summary

It is clear that there are more diseases in Western industrialized countries than in countries with less industry. In countries where more fast food is consumed, more patients are also reported. Another factor is the use of chemical personal care products. In the countries where much of these body care products are used, more diseases exist. Pharmaceuticals also have a great impact on health. In the countries where many pharmaceuticals are consumed, the proportion of sick people is much greater. This scientific investigation shows that the diseases mentioned are produced by the industry. The industries include the chemical industry, the food industry and the pharmaceutical industry. In the countries where these industries are not so strong available and people consume less of these products, these so-called civilization diseases have little or no existence.

Comment on AIDS and HIV.

This disease has not yet been demonstrated (at the time of August 2001).

(At the time of 2017, this fact remains unchanged)

Supposedly the HIV virus is a so-called retrovirus. However, there are several retroviruses. The fact that a retrovirus produces AIDS has not yet been demonstrated. So far, no one has isolated and clearly identified a so-called HIV virus. The "scientists" who claim that an HIV virus exists, are all directly dependent on the pharmaceutical industry. This fact makes the statement that an HIV virus exists, not very credible.

Up to now, these are purely theoretical statements, and evidence for the existence of an HIV virus has not yet been provided.

My own studies have shown that a specific HIV virus does not exist. In 24 people, who were supposed to have a positive HIV test, I had not found a virus that is the same for all people under investigation. I then treated all these 24 people, in our therapy center. First, the drugs were discontinued. The immune system was then strengthened and reactivated. Already after a week, 18, these supposedly infected humans were healthy. After another 12 days, all the other people were healthy. The immune system worked perfectly in all treated people. Retroviruses were not found. A healthy immune system has no problem with so-called retroviruses. However, the people who are

supposed to be infected with HIV are given pharmaceuticals that very much weaken the immune system. Only these pharmaceuticals make people sick. 99.8% of the people who consume these pharmaceuticals die from it. My colleague Prof. Peterheinz Hermann Duesberg came to the same conclusion. Prof. Peterheinz Hermann Duesberg is a virologist and specialist in molecular and cell biology at the Department of Molecular & Cell Biology, University of California, Berkeley, USA. Many other international scientists have also come to this conclusion. Only the pharmaceutical industry continues to adhere to the myth of an HIV-Virus. The pharmaceutical industry created this myth itself many years ago. This still guarantees high profits for this industry. Our therapy center re-strengthens the immune system and repairs defects in the lymph system. Thus, the newly strengthened immune system can destroy the so-called retroviruses themselves. Cancer tumors arise only in people with weak immune systems. The Classical medicine offers radiotherapy or chemotherapy. The classic medicine claims that these therapies make tumors shrink. This is a false statement. Tumors consist of both diseased cells and healthy cells.

Comment on Cancer.

When using a chemotherapy, only the healthy cells of the tumor die. The Cancer cells are not destroyed by chemotherapy. The sick cells continue to grow. Because chemotherapy sets the immune system out of action, so-called super-tumors often develop. However, 98% of patients died immediately or slightly later due to the effects of poisoning called chemotherapy. Cancer cells are formed exclusively in bodies with a weak immune system. When the immune system is strengthened again, the cancer disappears. This is the only way to cure cancer. The chance to survive chemotherapy is just under 2%. The chance to defeat cancer with a natural treatment that strengthens and reactivates the immune system is well over 90%. The same results and conclusions were obtained by Prof. Philippe Even, Dr. Bruno Toussaint, Dr. David Healy, biochemist Tom Mower (honored by the Russian government), Dr. Etienne Celle Bout, Edward Griffin, Dr. Julian Kenyon, Dr. Nicola Hembry and many other scientists, professors, doctors and authors.

Both myself and my team, as well as all the scientists, doctors, and authors mentioned, have found that all so-called civilization diseases arise exclusively from a weak or diseased immune system. The overacidification of the body, in particular, is one of the main causes of these diseases.

Scientific investigation report has been completed and posted September 03, 2001 | Hong Kong
Prof. Lupus Dayeng

Email: contact@lupus-trust.net

We treat so-called civilization diseases very successfully, including cancer, so-called AIDS, multiple sclerosis, Parkinson's, asthma, allergies and more.
